DNYANESH LAD

DATA ENGINEERING • ENTERPRISE INTEGRATION • SOLUTION ARCHITECTURE

Boston, MA | 765-536-9523 | lad.dnyanesh@gmail.com | linkedin.com/in/dnyanesh-lad | Portfolio

PROFESSIONAL SUMMARY

Enterprise Data Engineer and technical lead with 13+ years of experience designing complex data integrations, data warehouses, and master data solutions. Designed metadata-driven ingestion and reusable data quality frameworks, led healthcare data transformations, and guided cross-functional engineering teams through migrations and platform modernization. Combines hands-on SQL and Talend expertise with solution architecture and data modeling, complemented by Databricks certifications in Data Engineering and Generative AI.

CERTIFICATIONS

- **Databricks Certified Data Engineer Associate** | 2026
- **Databricks Certified Generative AI Engineer Associate** | 2026
- **Google AI Professional Certificate** | 2026
- **Reltio Cloud Advanced Certification** | 2019

TECHNICAL SKILLS

PLATFORMS & ADVANCED SQL Databricks (Spark/PySpark, Delta Lake, Unity Catalog), Teradata, Azure SQL, SQL Server, Oracle, Salesforce, Dataverse
ETL, MDM & BI TOOLS Talend, Informatica PowerCenter, Azure Data Factory, Informatica MDM, Reltio, Tableau, Power BI, Python/pandas
SCHEDULING & ORCHESTRATION Control-M, Tidal, Apache Airflow, Databricks Lakeflow Jobs
APIs & DEVELOPMENT TOOLS Postman, SoapUI, Swagger/OpenAPI, C#/.NET MVC, Visual Studio, IIS, GitHub, SVN, Jira, Agile/SDLC
AI TOOLS & METHODOLOGIES Microsoft Copilot Studio; Databricks AI (Agent Bricks, RAG, MCP, MLflow/Prompt Registry, Mosaic AI Vector Search)
HEALTHCARE DATA MODELS Cactus, Facets, Portico PNO, Choreo, GuidingCare

CORE COMPETENCIES

- Enterprise Data Integration & Solution Architecture
- Data Warehousing & Data Modeling
- Master Data Management (MDM)
- Technical Leadership & Architecture Reviews
- ETL/ELT & Metadata-Driven Pipeline Design
- Data Quality, Governance & Lineage
- Legacy Modernization & Cloud Migration
- Healthcare Payer Data & Systems Integration

PROFESSIONAL EXPERIENCE

Data Engineer III | CareSource | Jan 2026 – Sep 2026

- Led Provider-domain data migration following CareSource's acquisition of Commonwealth Care Alliance (CCA), guiding integration of Cactus credentialing and Facets data using Talend and Azure SQL while addressing differences in source and target data models.
- Designed reusable, metadata-driven Talend utilities for SFTP transfers and database-to-CSV exports, enabling large-scale migration across Provider, Member, Claims, Clinical, and Authorization domains.
- Defined product-specific retention and filtering rules across extensive Cactus credentialing datasets, providing technical direction to the implementation team.
- Evaluated a broad portfolio of legacy Talend jobs for phased retirement, traced cross-system dependencies, and identified an overlooked data flow that prompted changes to the production cutover plan.
- Provided source data extracts to the Modern Data Platform team for ingestion into CareSource's Databricks-based environment.

Lead Data Engineer | Commonwealth Care Alliance (CCA) | Apr 2021 – Dec 2025

- Architected and developed Talend integrations for a Teradata-based Enterprise Data Platform (EDP), introducing metadata-driven ingestion and SCD Type 2 processing across healthcare source systems; designed primary-key reconciliation to detect source hard deletes without native CDC.
- Established a reusable Data Quality framework with rule-level summaries and record-level exceptions, helping business teams resolve source data issues; the approach was adopted by Member, Authorization, Clinical, and Claims teams.
- Architected nightly source-to-platform reconciliation for the EDP Command Center and developed foundational Python/pandas table-population logic for one domain; supported subsequent engineering and Tableau reporting.
- Led Provider data transformation for a major claims migration to Facets, designing NPI/TIN-based identity mapping, attribute consolidation, and migration-specific data quality controls; supported a production launch without unexpected issues.
- Re-engineered an interconnected suite of Talend jobs and subjobs for new Medicare Advantage Prescription Drug (MAPD) products, incorporating plan and reference data while preserving MDM compatibility; delivered on schedule without reported production defects.

Lead Data Engineer | Commonwealth Care Alliance (CCA) (continued)

- Developed Teradata SQL transformations for outbound Salesforce integration consumed by MuleSoft, alongside Talend-based inbound CRM ingestion with SCD Type 2 history management.
- Refactored Provider outbound integrations following the retirement of the legacy MDM platform, sourcing Cactus data from Azure SQL and reproducing required cleansing and standardization rules; validated results before production deployment.
- Served as Provider Domain technical lead during the Teradata-to-Azure SQL migration, reviewing source inventories, mappings, and validation requirements while coordinating with implementation teams and business stakeholders.
- Led technical support for Provider integrations and personally enhanced the C#/.NET MVC Online Provider Directory using Visual Studio, including manual packaging and IIS deployment; presented and reviewed designs in architecture forums.

API Systems Analyst | Blue Cross Blue Shield of Massachusetts | Sep 2018 – Feb 2021

Engaged via Cognizant

- Analyzed enterprise API integration requirements for NCompass, a customized third-party CRM platform, and other consumers including CAQH; translated business data needs into API specifications and technical requirements.
- Profiled and validated source data across SQL databases, mainframe systems, and existing APIs to assess required attributes, request parameters, and integration design options.
- Maintained Swagger/OpenAPI specifications and an extensive enterprise API catalog, helping developers and QA teams clarify requirements, resolve implementation questions, and troubleshoot integration issues.
- Used Postman and SOAP UI extensively to construct and test requests, evaluate responses, validate data, and troubleshoot integration issues.
- Mentored a junior developer on Informatica PowerCenter source-to-landing and staging data preparation for the Reltio MDM project.

P-MDM Data Analyst | CareSource | Sep 2016 – Sep 2018

Engaged via Cognizant

- Gathered requirements and authored operating procedures, a user guide, and data dictionary for P-MDM, a custom Provider Credentialing and Contracting application.
- Designed the user-management and role-based screen-access data model, providing technical direction to Java developers; profiled application and MDM data using SQL to inform integration and match/merge analysis.
- Worked with Choreo Provider contracting data structures to support P-MDM integration, contributed to Informatica development, and produced ad hoc network adequacy reports using Facets data.

Datawarehouse Analyst/Developer | Amdocs | Jul 2013 – Sep 2014

Engaged via Magna Infotech | Rogers RSHM project

- Developed and enhanced Informatica PowerCenter/Teradata warehouse integrations and transaction-level fact processing for Rogers Remote Smart Home Monitoring (RSHM).
- Built daily, weekly, and monthly reporting data feeds consumed by MicroStrategy dashboards; supported job scheduling through Control-M and applied Informatica pushdown optimization.
- Diagnosed and resolved a production duplication issue caused by an unintended join, and collaborated directly with Rogers stakeholders during two on-site engagements.

MDM Data Analyst | Horizon Blue Cross Blue Shield of New Jersey | Jul 2011 – Oct 2012

Engaged via eTeam

- Developed Informatica PowerCenter mappings to integrate heterogeneous XML, Oracle, and SQL Server Provider data into MDM landing and Common Record Format staging structures, including Portico PNO integration.
- Analyzed source-to-target grain discrepancies for the Integrated Data Store (IDS) and designed a SQL LEAD/LAG approach to reconcile effective-dated records without duplication; the outsourced implementation team adopted the solution.
- Investigated MDM matching and rejection patterns, recommending cleansing and matching improvements, and advised data modeling and governance teams on source-system data relationships.

ETL Developer/Analyst | Centene | Aug 2010 – Jul 2011

Engaged via eTeam

- Built and deployed Informatica PowerCenter ETL reconciliation for EDI remittance and eligibility data against member-month records, supporting production implementations across multiple states.
- Built and supported warehouse ETL mappings using SQL overrides, pushdown optimization, and unconnected lookups for transformations and data validation.

EDUCATION

Bachelor of Engineering (B.E.), Computer Science | University of Mumbai | 2006
