DNYANESH LAD

Lead Data Engineer | Healthcare Payer Data Platforms & Cloud Modernization

Boston, MA | lad.dnyanesh@gmail.com | 765-536-9523 | linkedin.com/in/dnyanesh-lad | dnylad.github.io

PROFESSIONAL SUMMARY

Lead Data Engineer with 13+ years architecting enterprise data platforms for health insurance payers, including BCBS Massachusetts, BCBS New Jersey, CareSource, Centene, and Commonwealth Care Alliance. Deep expertise in cloud data platform modernization (Azure, Teradata), Master Data Management, and data governance across Claims, Provider, and Member domains. Led the end-to-end migration of a legacy claims system to Facets and a full Azure Cloud Migration for the Provider Domain, cutting significant manual processing effort while improving data quality and auditability.

CORE COMPETENCIES

Data Platform Architecture & Cloud Migration (Azure) • ETL/ELT Pipeline Design • Master Data Management (MDM/RDM) • Data Governance & Data Quality Frameworks • Data Lake / Data Warehouse Design • Healthcare Claims & Provider Data (Facets, Cactus) • Cross-Functional & Global Team Leadership • BI & Data Visualization

TECHNICAL SKILLS

ETL / ELT	Azure Data Factory, Talend, Informatica PowerCenter, Databricks	**Scheduling**	Airflow, Tidal, Control-M
MDM	Reltio, Informatica MDM	**Versioning**	GitHub, SVN
Databases	Azure Data Services, SQL Server, Oracle, Teradata	**Languages**	Python, C# / .NET, SQL
Visualization	Tableau, Power BI	**Methodologies**	Agile, SDLC
APIs	Postman, SOAP UI, Swagger / OpenAPI	**Healthcare Apps**	Facets, Cactus, Portico PNO, Choreo, GuidingCare

Emerging: Microsoft Copilot Studio (AI Agents)

PROFESSIONAL EXPERIENCE

Data Engineer III — CareSource (following acquisition of Commonwealth Care Alliance) *Jan 2026 – Present*

- Led data migration of Commonwealth Care Alliance (CCA) platforms into CareSource's enterprise data ecosystem as part of the post-acquisition integration effort, ensuring data continuity and integrity across 11 source systems.
- Designed and executed the CCA data archival strategy, defining retention rules and archival pipelines to preserve historical and regulatory data ahead of legacy system retirement.
- Drove decommissioning of legacy CCA systems, coordinating with cross-functional teams to sequence cutover, validate data completeness, and minimize business disruption during the transition.
- Collaborated with the Modern Data Platform (MDP) team by generating data extracts to support migration into their Databricks-based platform.
- Building hands-on experience with Microsoft Copilot Studio by enhancing conversational flows for AI agents alongside the CareSource CRM team.

Lead Data Engineer — Commonwealth Care Alliance *Apr 2021 – Dec 2025*

- Architected and led end-to-end data integration from multiple source systems into an Enterprise Data Platform (EDP) built on Teradata, driving platform modernization and advanced analytics for Claims and Provider domains.
- Designed and implemented scalable ETL pipelines using Talend and Azure Data Factory, reducing manual processing effort across 50+ source feeds and cutting pipeline runtime by 75%.
- Served as Tech Lead for the Azure Cloud Migration of the Provider Domain and played a pivotal role in the Claims Transformation Program, migrating claims processing from a legacy system to Facets — recognized with a COO Appreciation Award (Apr 2023).
- Spearheaded design and implementation of an enterprise Data Quality Framework using Tableau dashboards, improving data accuracy and completeness visibility across all downstream teams.
- Mentored a global team of 6 data engineers through knowledge-sharing sessions and code reviews; served as a key contributor to the Architecture Review Board (ARB) and Design Review Board (DRB).
- Partnered with BI, Analytics, and Data Science teams to deliver curated, analytics-ready datasets; owned and maintained the Online Provider Directory.

API Systems Analyst — Blue Cross Blue Shield of Massachusetts *Sep 2018 – Feb 2021*

Engaged via Cognizant

- Managed end-to-end API implementation lifecycle, running effort estimation and implementation planning across Dev and QA teams.
- Performed detailed back-end and legacy database analysis to reverse-engineer API logic, then authored API specifications and Swagger (OpenAPI) definitions used as the system of record for Dev Portal documentation.
- Acted as the primary liaison between Business and Technology teams to clarify, finalize, and sign off on API requirements and test results.
- Owned critical SDT artifacts, including the API catalogue and Dev Portal, ensuring accurate and current API documentation across 30+ APIs.

P-MDM Data Analyst — CareSource *Sep 2016 – Sep 2018*

Engaged via Cognizant

- Gathered and documented business and technical requirements for the P-MDM application; authored the P-MDM User Guide covering Standard Operating Procedures and the data dictionary.
- Performed data profiling and SQL-based analysis across downstream systems to define transformation, validation, and cleansing rules, and designed data flows and mapping documents for downstream integration.
- Participated in data modeling sessions to enhance the P-MDM data model and facilitated SQA reviews to validate scope, requirements, and test cases.
- Generated ad-hoc Network Adequacy business reports using Facets Claims System data.

Datawarehouse Analyst/Developer — Amdocs *Jul 2013 – Sep 2014*

Engaged via Magna Infotech

- Translated stakeholder and business requirements into technical designs, documenting High-Level Design, Low-Level Design, data flows, process flows, and traceability matrices.
- Designed and implemented daily, weekly, and monthly automated penetration reports for the business using Informatica PowerCenter for the RSHM Datawarehouse project.
- Configured and managed job scheduling using Control-M to support reliable, automated ETL execution.

MDM Data Analyst — Horizon Blue Cross Blue Shield of New Jersey *Jul 2011 – Oct 2012*

Engaged via eTeam

- Ensured adherence to Data Governance rules and processes; participated in MDM data modeling reviews to identify and mitigate data model granularity issues.
- Assisted Data Stewards in analyzing and refining Reference Data Lists, and performed data profiling to propose cleansing, standardization, and validation rules.
- Analyzed reject logs and MDM process statistics to identify issues and tune match/merge rules, improving downstream data accuracy.

ETL Developer/Analyst — Centene *Aug 2010 – Jul 2011*

Engaged via eTeam

- Designed and developed an automated 820-834 reconciliation process using Informatica PowerCenter.
- Built and tuned ETL jobs for Data Warehouse projects, applying Informatica best practices — Push Down Optimization, SQL override, unconnected lookups — to reduce extraction time.
- Handled multiple ad-hoc data requests, prioritizing based on business need and impact.

CERTIFICATIONS & ACHIEVEMENTS

- Google AI Professional Certificate — Mar 2026
- Reltio Cloud Advanced Certification — Dec 2019
- COO Appreciation Award, Claims Transformation Program, Commonwealth Care Alliance — Apr 2023
- Cognizant Healthcare Practice "Going the Extra Mile" Award — Dec 2017

EDUCATION

B.E., Computer Science — Mumbai University, 2006
